

Sentry - Secure File Sharing & Cloud Collaboration Program

Today's Business World:

And the Devastating Consequence of Security Breach

The unauthorized employee use of online services and personal devices has become an unbearable problem for IT, as well as a security concern for businesses. Consumer-grade applications such as free file sharing tools are inherently insecure, performing transfers of files that are unencrypted. The rise of BYOD has furthered this problem, being that IT loses visibility of confidential company data the moment it is accessed or shared through a personal device.

50% of firms have blacklisted free file sharing tools. Yet the need for collaboration remains. Employees *expect* to access their work data from mobile devices, and businesses now have to consider a truly secure, and scalable, team collaboration tool for their company.

Implement a file sharing and cloud collaboration tool that allows **secure** access across:

- ➔ Androids
- ➔ iPhone / iPad
- ➔ Macs
- ➔ PCs

55% of
workplace file sharing
USERS do not tell their IT departments
about the apps they use.

Bólido Networks Sentry:

Implementing a secure file sharing and collaboration tool

Sentry offers a secure tool that can be accessed across all devices, while on-the-go, from anywhere in the world. A solution that users love, while IT controls. This top-down tool provides access to secure file sharing from any device, cloud sync from any desktop, and web access from any common browser.

Industries that naturally lean toward a secure tool will find that Sentry provides an essential file sharing and collaboration solution, ideal for industries such as:

- ➔ Finance
- ➔ Education
- ➔ Healthcare
- ➔ Government

Bólido Networks

Collaboration Features:

User access

Ease-of-use is essential in user adoption for any file sharing and collaboration tool. Sentry features include:

- ➔ Preview, edit files in the cloud
- ➔ Sync to multiple desktop folders
- ➔ Mobile application
- ➔ Global web access
- ➔ Send secure links
- ➔ Eliminate large file sharing via email
- ➔ Upload unlimited versions

84% of Finance departments

report using free file sharing.

Source: <http://www.net-security.org/secworld.php?id=13060>

By making collaboration accessible to your entire organization, employees across departments – or around the world – are able to reduce the time to communicate an idea and complete a project.

Administrative Features:

IT control

It's your company. Control the file sharing and collaboration within it. Create and manage your company's cloud and give the IT department the ability to manage security consistently within the organization. Put IT managers in control of your data:

- ➔ Create administrative reports
- ➔ Audit trail reporting
- ➔ Device approval
- ➔ Device management
- ➔ SharePoint integration
- ➔ Active directory & LDAP integration
- ➔ Set company-wide retention policies
- ➔ Outbound API call integration
- ➔ Add plug-ins
- ➔ View file and user statistics

66% of

workers are using free file sharing to send corporate documents.

Source: <http://www.net-security.org/secworld.php?id=13060>

Empower IT to take control of who accesses a document or folder, who can share, and who can edit each file. Control access to the tools you use, permissions, and reporting.

Data Security & Privacy in the Cloud

Encryption, Compliance, and more

The key to an acceptable file sharing and collaboration tool, is that the data is secure at all times. Your data will be encrypted with a unique three-tiered encryption system, and stored in tier three and tier four data centers, all of military grade security. Your data follows this process:

- Locally encrypted at 256 bit AES
- Encrypted in transit during upload
- Encrypted at rest in the data center

This system enables you to become compliant with government regulations such as HIPAA, Safe Harbor, GLBA, and Sarbanes-Oxley. A few features of the secure data centers include:

- Onsite monitoring 24 hours/days, 7 days/week, 365 days/year
- Physical security, including biometric identification mechanisms
- Redundant cooling and fire suppression systems

The data you transfer with Sentry is kept private and kept safe at all times. Security breaches are prevented by encryption and off-site storage, where nobody else can access your data: The ultimate must-have in data security.
